

Presentation by Lema Agrivest

Company Profile

MARCH 2022

Our Company

Lema Agrivest is currently training and installing hydroponics and aquaponics growing systems for its customers in urban areas to help them grow their own vegetables together with fish and be self-sufficient. We aim to extend our services to the rural communities where our people depend on natural resources like arable land for subsistence farming. With Hydroponics Farming, one can grow vegetables using 90% less space, 90% less water, 3x more yield than traditional farming and for automated watering we will take advantage of solar-based solutions for rural communities where there is no access to electricity.

About Us

The Story

Everything started when the founder attempted to find the necessary resources to reduce his regular expenses and he chose to cut food costs. He confronted the test of having farmland as he was an occupant and started exploring urban farming techniques.

Our Mission

To accelerate Africa's transition to sustainability and self-sufficiency through innovative farming techniques.

Our Vision

To be Africa's leading provider of easy access to sustainable farming, one house at a time.

About Us

Meet Our Team

Mochesane Mpali
Founder

Co-Founder

Co-Founder

Consulting & Training

We will take you through our process and help you every step of the way to get you up and running

Aquaponics & Hydroponics Systems

We would love to lend a helping hand in designing your aquaponics and/or hydroponics system

Fresh and Organic Produce

Our aquaponically and hydroponically grown, fresh produce will rock your taste buds on a whole new level

About Us

The Service

Through Hybrid Gardening Methods It Is Possible To Create A Reliable Source Of Food Sustainably, Dependent On Each Individual's Needs.

1st Portfolio Projects

We compile all of our works and projects into one final destination, and that is to showcase our values and our working qualities.
